CAREER OBJECTIVE

A driven and accomplished Computer Science professional pursuing a Master's in Artificial Intelligence at the University of Sargodha, with a distinguished academic record (CGPA 3.65/4.0) and practical experience in AI model training, machine learning, and enterprise IT operations. Author of internationally published research in image processing and AI-powered vehicle safety systems, with proven expertise in end-to-end model development — from dataset curation and training to rigorous evaluation and deployment-ready validation. Adept at translating complex AI concepts into tangible, real-world solutions, I am seeking a challenging role where I can harness my research background, technical proficiency, and passion for innovation to build intelligent systems that create lasting impact.

EDUCATION

Master of Science in Artificial Intelligence (MS-AI)

[University of Sargodha, Sargodha](#) Expected postGraduation: 2028

Bachelor of Science in Computer Science (BS-CS)

[The Women University, Multan](#) CGPA: 3.65 / 4.0

Intermediate – F.Sc. Pre-Engineering

[Govt. Associate College for Women, Ahmad Pur Sial](#) 960/1100 | Grade A | 2021

Matriculation – Science Group

[Elite School System](#) 1009/1100 | Grade A | 2019

PROFESSIONAL EXPERIENCE

AI Model Training & Testing Specialist | [Freelance / AI Projects](#) | 2023 – 2024

- Designed, curated, and pre-processed large-scale datasets for supervised and unsupervised machine learning model training across domains including computer vision and NLP.
- Conducted systematic model evaluation, performance benchmarking, and hyperparameter tuning to optimize accuracy and generalization.
- Collaborated on an image processing research project resulting in a peer-reviewed publication on skin disease detection using deep learning techniques.
- Developed and validated safety-critical AI models for next-generation vehicle systems, published in an international research journal.
- Documented model architectures, training pipelines, and test results in detailed technical reports.

Intern – Multi-Department | [Pakistan International Airlines \(PIA\)](#) | 2024

- Rotated across Finance, Cargo, Supply Chain, and IT departments, gaining broad exposure to enterprise operations and technology infrastructure.
- Assisted in administrative workflows, data entry, report preparation, and cross-departmental coordination.
- Supported the IT department with technical troubleshooting, system maintenance, and data management tasks.
- Analysed operational data and contributed to process improvement initiatives within the cargo and supply chain divisions.

TECHNICAL SKILLS

- ▶ **AI & Machine Learning:** Model Training, Testing & Validation, Hyperparameter Tuning, Data Pre-processing, Computer Vision, NLP Basics
- ▶ **Programming & Web:** HTML, CSS, Python (Basic), JavaScript (Basic)
- ▶ **Productivity Tools:** MS Office Suite (Word, Excel, PowerPoint)
- ▶ **Other:** Content Writing, Data Management, Basic IT & Technical Support

CERTIFICATIONS & ACHIEVEMENTS

- ▶ Scholarship Certificate – Matriculation (Academic Excellence)
- ▶ Scholarship Certificate – Intermediate, Punjab Education Endowment Fund (PEEF)
- ▶ Certificate – International Conference on Emerging Trends and Challenges in AI (2024)
- ▶ Certificate – Seminar on React Native: A Future Driven Technology
- ▶ Certificate – AFS Venture Spark 2023 – Project Exhibition

INTERNATIONAL PUBLICATIONS

- ▶ ***Skin Disease Detection Using Image Processing Techniques*** – Published in IJCIS (International Journal of Computer and Information Sciences)
- ▶ ***Next-Gen Vehicle Safety: An AI-Driven Approach*** – Published at Konvell.org

IOT-BASED PROJECTS

Smart Gloves | IoT / Embedded Systems

- ▶ Designed and developed sensor-embedded smart gloves capable of detecting hand gestures and translating them into real-time digital signals for assistive technology applications.
- ▶ Integrated flex sensors, an accelerometer, and a microcontroller (Arduino) to capture precise finger-movement data and transmit it wirelessly via Bluetooth.
- ▶ Implemented signal processing algorithms to classify gestures with high accuracy, enabling communication support for individuals with speech or hearing impairments.
- ▶ Conducted extensive hardware testing and iterative prototyping to improve sensor calibration, glove ergonomics, and system reliability.

Smart Irrigation System | IoT / Agriculture Technology

- ▶ Built an automated irrigation system using IoT sensors to monitor real-time soil moisture, temperature, and humidity levels for precision agriculture.
- ▶ Programmed microcontroller logic to autonomously activate or deactivate water pumps based on sensor thresholds, significantly reducing water wastage.
- ▶ Integrated a cloud dashboard for remote monitoring and control of irrigation schedules via a mobile interface.
- ▶ Demonstrated the system at AFS Venture Spark 2023 Project Exhibition, receiving recognition for innovation in smart farming solutions.

LANGUAGES

- ▶ **English:** Fluent (Professional Working Proficiency)
- ▶ **Urdu:** Native
